

Every Physician's **DREAM!** Mobility, Security, and Reliability, at the Point-of-Care.

The Visionary DREAM™ EMR allows health care professionals to carry a powerful PC instead of a clipboard or patient file — bringing real-time patient information to the point-of-care.

Use Visionary DREAM™ EMR and a Tablet PC to automate paperwork and access patient files wirelessly — in the exam room, in the ward or at the front desk. Use the digital pen to input information directly to patient files and medical applications, reducing the turnaround time of important patient data and billing information.

An EMR that Thinks Like You Do

The DREAM™ EMR is unmatched in its customizability, and actually adapts to your clinical style. DREAM™ EMR allows you to select everything from the order of your questions to the word choice and phrasing of your notes. The DREAM™ EMR also adapts to your preferences by making your most frequently used chief complaints, medications and diagnoses more accessible, as it learns your tendencies.

Enhance Patient Care and Increase Productivity

DREAM™ EMR is a true time-saver. Document an entire review of systems with a single click, easily retrieve or import historical data, and instantly view trends in weight, blood pressure and other vitals. Easy data entry and immediate access to key information mean that you can see more patients and dramatically improve patient care!
