

Access and Capture Information Anytime, Anywhere.

Features:

- **Completely Customizable**

DREAM™ EMR allows the user to define and customize templates from scratch or edit existing ones on the fly. The templates can be customized permanently or specifically for the patient encounter.

- **Patient Tracking**

Patients can be tracked from the moment they check-in right up to checkout. From the nurse to the doctor information is captured and the patient can be tracked via a color-coded system that is user definable.

- **Labs and Pharmacy**

Physicians can order and retrieve lab requests and order prescriptions right from DREAM™ EMR.

- **Simple Layout and Easy Navigation**

DREAM™ EMR offers a simple SOAP note layout and easy to navigate menu options that will increase speed and make recording the encounter a smoother, more efficient process.

- **Referrals**

Patients can be referred to a specialist with the tap of a pen or the click of a mouse. The referral letter is automatically generated and includes only the information the provider chooses to include.

- **Eliminate Transcription Costs**

DREAM's intuitive sentence builder allows the doctor to personalize the chart notes and eliminate the cost of transcription services and dictation.

- **Visionary STAR™**

Soon to be released is our Visionary STAR™ Document Management System. Visionary STAR™ will integrate with DREAM™ EMR to allow for document retrieval, scanning of images, and storage of paper charts, so your practice can become truly paperless. Visionary STAR™ will index by patient number and date for fast information retrieval.
